Over one thousand Architects & Engineers are calling for a real investigation.

Architects and Engineers for 9/11 Truth (AE911Truth)

Architects & Engineers for 9/11 Truth is a non-profit corporation. We are a non-partisan association of architects, engineers and affiliates dedicated to exposing the falsehoods, and to revealing truths, about the destruction of the World Trade Center high-rises on 9/11/01. Visit our website. Sign our petition. Join us!

Why We Are Re-Examining the Destruction of the World Trade Center

The shock from the staggering loss of life and destruction on 9/11 left most of us relying upon analyses offered by pre-selected “experts” with serious conflicts of interest.

Since 2001 we have had time to emerge from the hypnotic trance of the trauma and begin to rationally assess the scientific forensic evidence. This evaluation casts grave doubt upon the media stories and the official reports by the 9/11 Commission, FEMA, and NIST (National Institute of Standards and Technology). Now over 1,000 Architects & Engineers are calling for a real investigation. Our numbers are growing rapidly.

Learn More at AE911Truth.org

A vast array of information and resources is available on our website, including informative DVDs that feature dynamic multimedia presentations by Richard Gage, AIA and others.

AE911Truth exposes NIST falsehoods - i.e. a localized failure in a steel-framed building like WTC 7 cannot cause a catastrophic collapse like a house of cards at free-fall speed without a simultaneous and patterned loss of several of its columns at key locations within the building.
— Kamal Obeid, PE, Structural Engineer

I think we were all shocked when the buildings came down; it just didn’t seem right. Richard Gage, AIA, does an excellent job uncovering the problems with the official explanation in a scientific, non-partisan way. It’s “An Inconvenient Truth” about 9/11 that everyone should be aware of. Brace yourselves.
— Chris Mungenast, AIA

The collapse of WTC 7 looks like a classic explosive DEMOLITION:

- The building falls almost straight down in about 7 seconds — and at free-fall acceleration for 100 feet — per NIST.
- The overall building mass falls uniformly through what was the path of greatest resistance. This requires a precisely timed, patterned removal of critical columns.
- The kink in the roofline is characteristic of a demolition timing sequence that causes buildings to implode symmetrically by collapsing inward.

SMALL POCKETS OF SHORT-LIVED FIRES could not cause floor system failure by “thermal expansion” (NIST) in this modern fire-proofed steel-framed structure.

A single, localized failure (a girder unseated — NIST) could not cause the systematic and total FAILURE OF 400 OTHER STRUCTURAL STEEL CONNECTIONS PER SECOND.

Numerous incidents and recorded statements reveal FOREKNOWLEDGE. These include a countdown, warnings, and announcements from both CNN and the BBC of the collapse... before it happened!

Evidence Excluded from the NIST Report:

1. Most of the rubble from the implosion ended up in this neat pile — centered within the original footprint.
2. The 47-story steel-framed structure was dismembered and reduced to a small pile only a few stories high — with complete destruction-unmistakable signs of a controlled demolition.
3. Hot spots atop the rubble, detected by NASA infrared imaging, persisted for weeks, indicating temperatures in the pile far above those of normal office fires.
4. Evidence of melted steel and "severe high temperature corrosion" documented in Appendix C of FEMA report. Problem: Office fires don't melt steel. Other research revealed the signature of thermite — an incendiary that creates molten iron.
5. FEMA's May 2002 report concluded that its hypothesis [diesel-fuel-fed fire] had only a "low probability of occurrence" and that "further investigation and analysis were required", although at that time, removal and destruction of the evidence had already been orchestrated.

The Truth is in the Evidence:

- FDNY and others found several tons of molten metal "flowing like lava" under all 3 high-rises. 1400°F office fires cannot produce 2700° steel. Thermit incendiaries can.
- Microspheres formed from molten iron and aluminum were found in the WTC dust by USGS, the environmental firm RJ Lee, and independent physicists. Thermite reactions account for this phenomenon.
- WTC dust samples contain small chips of highly energetic nano-thermite composite materials — uniformly nano-sized, proportioned and embedded in an organic gas-generating (explosive) matrix.

WTC Twin Towers

WTC 1 & 2 exhibited several features typical of controlled demolitions as well as extreme explosiveness, pulverization, lateral ejection of debris, and chemical evidence.

1. Constant acceleration through what was the path of greatest resistance — no time for "crushing"
2. Unnaturally symmetrical debris distribution
3. Extremely rapid onset of destruction
4. Over one hundred first responders reported explosions and flashes of light
5. Multi-ton steel sections ejected laterally 600 ft at 50 mph
6. Mid-air pulverization of 90,000 tons of concrete, metal decking, and floor trusses
7. Massive volume of expanding pyroclastic-like clouds
8. 1200-foot diameter debris fields: no “pancaked” floors found
9. Isolated explosive ejections seen 20-40 stories below cascading demolition canopy
10. Total building destruction: dismemberment of steel frame
11. Several tons of molten iron found under all 3 high-rises
12. Evidence of thermite found in previously molten metal, WTC dust and steel
13. Sophisticated nano-thermite explosives found in WTC dust samples
14. No precedent for steel-framed high-rise collapse due to fire
